EV1 “Extreme Vehicle 1” is a demilitarized Ripsaw platform that has been designed specifically for private sector, commercial and recreational uses. From Hollywood to power line companies to extreme off-road enthusiasts, the EV1 never ceases to amaze its operators and out performs everything on the market today. It is designed to withstand challenges other vehicles this size would not be able to endure. It is also designed for long life and low maintenance with an ease of access, thus reducing cost.

A modified version of EV1 was custom built for use in both G.I. Joe Retaliation and the Mad Maxx Fury Road major motion pictures.
